

CHELSEA EYE AND COSMETIC SURGERY OUT OF SIGHT

It takes a certain charmed bone structure—and great hair—to really pull off glasses. Most of us don't have either and can choose to stumble through life either squinting at cuties or wearing glasses to aim for ironic geek chic. But at Chelsea Eye they can correct your vision and improve the way you look!

Drs. Eviatar and Coad are pioneers in laser vision correction surgery and have been performing it since the procedure was approved by the FDA in 1995. Since then, there have been many advances in the procedure, and Chelsea Eye has adopted the most advanced of these new techniques—IntraLase (or bladeless LASIK) and CustomVue.

"At Chelsea Eye we have found this new technology to be the safest and most precise. Last month a study commissioned by the US Navy confirmed that this technology provides such superior results that US fighter pilots having LASIK can only have this type of LASIK procedure," says Alicia Adema, LASIK Director at Chelsea Eye.

In addition to offering patients the most advanced vision correction treatments, the doctors at Chelsea Eye also specialize in procedures to improve the way you look. The particular focus is on the face and non-invasive treatments around the face and eyes. Dr. Eviatar specializes in recontouring the face with fillers such as Radiesse, Sculptra, Juvederm and ArteFill and non-invasive treatments such as Botox Cosmetic. These treatments are available not only for patients who want to look younger and more rested, but also for patients who suffer from facial lipoatrophy.

Chelsea Eye has been a community-based practice since 1993 and has extensive experience treating the medical and cosmetic needs of its patients. They offer cutting edge treatments for all eye conditions such as advanced cataract surgery with multi-focal lens implants so that patients do not need glasses for distance or reading. To learn more about the procedures offered at Chelsea Eye, attend A Night of Beauty at their office at 6–8pm, May 8.
